

Sorting and Feeding of Sprayheads with a ZE2500

Feeding & Handling System
Ref. 155

Sprayhead, $\varnothing 23$ mm, height 18 mm

RNA Automation Ltd

Description:

Sector

Aerosol Industry

Component

Sprayhead, Ø23 mm, height 18 mm

Technical Requirements

The feeding of the sprayhead with correct positioning.

Discharge Position

Placed on the large diameter

Operation Description

The spray heads are to be fed to a customer rotary indexing machine for assembly. The sorting is carried out on 8 individual tracks on a linear feeder. The advantage of this concept is that the speed of the individual tracks can be reduced and disruptions on individual tracks do not lead to outage of the machine. A swivel base serves to join the tracks. This solution which is scalable for other capacities requires no air sorting.

Performance

2000 parts per minute
